

## Bryophytes? What are they?!

An introductory workshop

**Date** Saturday 30<sup>th</sup> September

**Time** 12.30 pm – 5 pm

**Venue** Cambo Heritage Centre

You may not have heard of them or paid them much attention, but bryophytes (a group of plants that includes mosses, liverworts and

hornworts) can be found almost everywhere.

They are incredibly diverse in size and form – mosses range from the microscopic to over a metre! – and can also be useful habitat indicators.

***We want to get more people looking at Fife's bryophytes!***

Join us to learn more as expert Clare Rickerby gives an introduction to this fascinating group, including key features and identifying them in the field.

No experience necessary. We will spend time indoors and outdoors.

**Places are FREE but limited, so booking is essential.**
